### Product Details<sup>1</sup>

Fund Assets	\$7,499,913,128.67
Fund Inception Date	29/08/2003
Number of Securities Including Cash	152
Bloomberg	TGTRFAD LX
ISIN	LU0170475585
Base Currency	USD
Investment Style	Multi-Sector
Benchmark	Bloomberg Barclays Multiverse Index
Morningstar Category™	Global Flexible Bond

### Asset Allocation<sup>2</sup>

Market Value—Percent of Total	%
Fixed Income	90.76
Cash & Cash Equivalents	9.24

### Fund Description

The Fund aims to maximise total investment return consisting of a combination of interest income, capital appreciation, and currency gains by investing principally in a portfolio of fixed and floating rate debt securities and debt obligations issued by government and government-related issuers or corporate entities worldwide. The Fund may invest in investment grade and non-investment grade debt securities. The Fund may also use various currency-related and other transactions involving derivative instruments.

## Portfolio Manager Insight

## Performance Review

## ONE-MONTH KEY PERFORMANCE DRIVERS

	Currencies	Duration	Credit
HELPED	Norwegian Krone	Argentina	—
	Indonesian Rupiah	Mexico	—
	Argentine Peso	—	—
HURT	Australian Dollar (Net-Negative Position)	—	—
	Euro (Net-Negative Position)	—	—
	Mexican Peso (Tactically Negative Position)	—	—

- Directional shifts in sovereign bond yields were mixed across emerging markets, where several of the more resilient economies saw price rallies and declining yields, while weaker areas experienced price pressures and rising yields. Sovereign bond yields notably declined in Mexico, Colombia and Indonesia. Select duration exposures in Latin America (Argentina and Mexico) contributed to absolute fund performance. We have tactically adjusted specific position sizes in various emerging markets in recent quarters, notably selling some positions into strength as local yield curves rallied lower on substantial rate cuts from local central banks, and increasing some positions as medium-term valuations turned favourable. We continue to largely avoid developed market duration exposures in preference for higher yields available in select local-currency markets.
- In currency markets, the US dollar (USD) returned to a broad-based weakening pattern in November after finishing the prior month on a strengthening trend. Major developed market and emerging market currencies alike strengthened against the USD. Positions in northern European currencies (the Norwegian krone and Swedish krona) contributed to absolute fund results, as did currency positions in Latin America (the Argentine peso and Colombian peso) and Asia ex Japan (the Indonesian rupiah).
- The fund's net-negative positions in the Australian dollar and the euro detracted from absolute performance, as did tactical positioning (negative) in the Mexican peso. However, the fund's net-positive position in the Japanese yen contributed to absolute results. We expect the yen to appreciate against the USD in upcoming months given Japan's strong external balance and repatriation flows and the yen's perceived safe-haven status. We also retained our net-negative positioning in the Australian dollar as a proxy hedge against broad-based beta risk across emerging markets.
- From a positioning standpoint, we continue to maintain low portfolio duration. We are significantly underweight developed market duration, preferring to hold short- to intermediate-term US Treasuries, while holding no exposure to the long end of the curve. We hold no duration exposure in the eurozone. Instead, we continue to emphasise select local-currency bonds outside of the major developed markets, in countries that we view as having resilient fundamentals and attractive risk-adjusted yields. We are counter-balancing those various risk exposures with perceived safe-haven investments, such as the Japanese yen and Swiss franc, and we are hedging a substantial amount of local-currency risk through proxy hedges (negative Australian dollar) and direct hedges (South Korean won, Mexican peso and Brazilian real). We are underweighting credit markets, which we view as significantly overstretched and vulnerable to insolvencies. Overall, we are aiming the strategies to defend against overvalued asset categories that remain vulnerable to ongoing economic shocks.

## Outlook &amp; Strategy

- We remain cautious on the risk profiles in certain areas of the global fixed income markets and anticipate a staggered timeline for when specific investment opportunities may arise. Regional lockdowns and restrictions will likely continue to be needed in upcoming months to counter the exponential spread of COVID-19. Mobility restrictions will continue to be the most effective tool of virus suppression until a vaccine becomes broadly available. Until that point, lost incomes and damaged aggregate demand will continue to have a detrimental impact on macroeconomic conditions.
- We expect perceived safe-haven assets to remain relevant during the upcoming months as the health crisis worsens, but to eventually diminish in importance as medical advances incrementally beat back the disease. Ultimately, we envision being constructive in a number of regions as the world transitions towards a post-COVID era. However, it remains crucial to be highly selective. Several risk assets continue to remain overvalued, reflecting an underappreciation for the economic impacts of the health crisis. We see elevated risks for financial market volatility in the remainder of 2020 and the first quarter of 2021, given the extreme dislocations between asset prices and macroeconomic fundamentals.
- We continue to maintain a tactically opportunistic stance that focuses on higher allocations to perceived safe-haven assets, lower duration exposures in select emerging markets, risk-adjusted position sizing and optimised liquidity. We're aiming to derive alpha from different sources than the low-to-negative yielding developed fixed income markets, which have limited upside potential and asymmetric interest-rate risks as yields remain near historic lows and debt loads rise to record levels. Currency markets and specific higher-yielding local-currency emerging markets currently offer compelling alpha opportunities, in our assessment.
- The timing and effectiveness of vaccine treatments will be the key determinant for economic activity and financial asset valuations in the upcoming year. COVID-19 cases appear likely to reach a zenith during the winter months before vaccine treatments may cause the pandemic to ebb in the late spring and summer of 2021.
- Environmental, social and governance (ESG) factors will play a major role in rebuilding the post-COVID world. Social cohesion and good governance have the power to accelerate a country's post-crisis recovery, or the lack thereof can stymie it. Tragically we have seen the consequences of weak ESG factors in specific emerging markets during the pandemic. Countries that were less prepared for a health crisis due to weaker health care systems and less developed infrastructure, and/or less prepared for an economic crisis due to fiscal imbalances, high levels of debt and external dependencies, have suffered greater damage. By contrast, countries that were in stronger fundamental shape before the crisis, with stronger institutions, lower levels of debt and more diversified economies, have generally fared better.

- Widening income inequality in many countries also remains a critical issue that threatens to undermine economic stability and intensify social discord. Damaged economies and elevated unemployment from the pandemic have only worsened several pre-existing structural problems. Countries that effectively address these challenges in the years ahead can strengthen the underpinnings of their economies, while those that neglect these factors risk further instability. We expect ESG to be a defining attribute for global fixed income markets in years ahead. Countries that are projected to improve on ESG factors often present the strongest investment opportunities.

**Portfolio Characteristics<sup>4,5,6</sup>**

7. The average credit quality (ACQ) rating may change over time. The portfolio itself has not been rated by an independent rating agency. The letter rating, which may be based on bond ratings from different agencies (or internal ratings for unrated bonds, cash and equivalents), is provided to indicate the average credit rating of the portfolio's underlying investments and generally ranges from AAA (highest) to D (lowest). For unrated bonds, cash and equivalents, ratings may be assigned based on the ratings of the issuer, the ratings of the underlying holdings of a pooled investment vehicle, or other relevant factors. The ACQ is determined by assigning a sequential integer to all credit ratings AAA to D, taking a simple, asset-weighted average of investments by market value and rounding to the nearest rating. The risk of default increases as a bond's rating decreases, so the ACQ provided is not a statistical measurement of the portfolio's default risk because a simple, weighted average does not measure the increasing level of risk from lower-rated bonds. The ACQ may be lower if cash and equivalents are excluded from the calculation. The ACQ is provided for informational purposes only. Derivative positions are not reflected in the ACQ.

**Investment Philosophy**
**Beliefs and Guiding Principles**

- An unconstrained approach to global fixed income investing can lead to long-term value potential
- Integrating global macroeconomic analysis with in-depth country research can help identify long-term economic imbalances
- Actively allocating risk across three independent potential sources of alpha can deliver diversification benefits and the potential for more consistent returns in diverse markets

9. Ratings shown are assigned by one or more Nationally Recognized Statistical Rating Organizations ('NRSRO'), such as Standard & Poor's, Moody's and Fitch. The ratings are an indication of an issuer's creditworthiness and typically range from AAA or Aaa (highest) to D (lowest). When ratings from all three agencies are available, the middle rating is used; when two are available, the lowest rating is used; and when only one is available, that rating is used. Foreign government bonds without a specific rating are assigned the country rating provided by an NRSRO, if available. The Not Rated category consists of ratable securities that have not been rated by an NRSRO. The Not Applicable category consists of nonratable securities (e.g., equities). Cash includes equivalents, which may be rated.

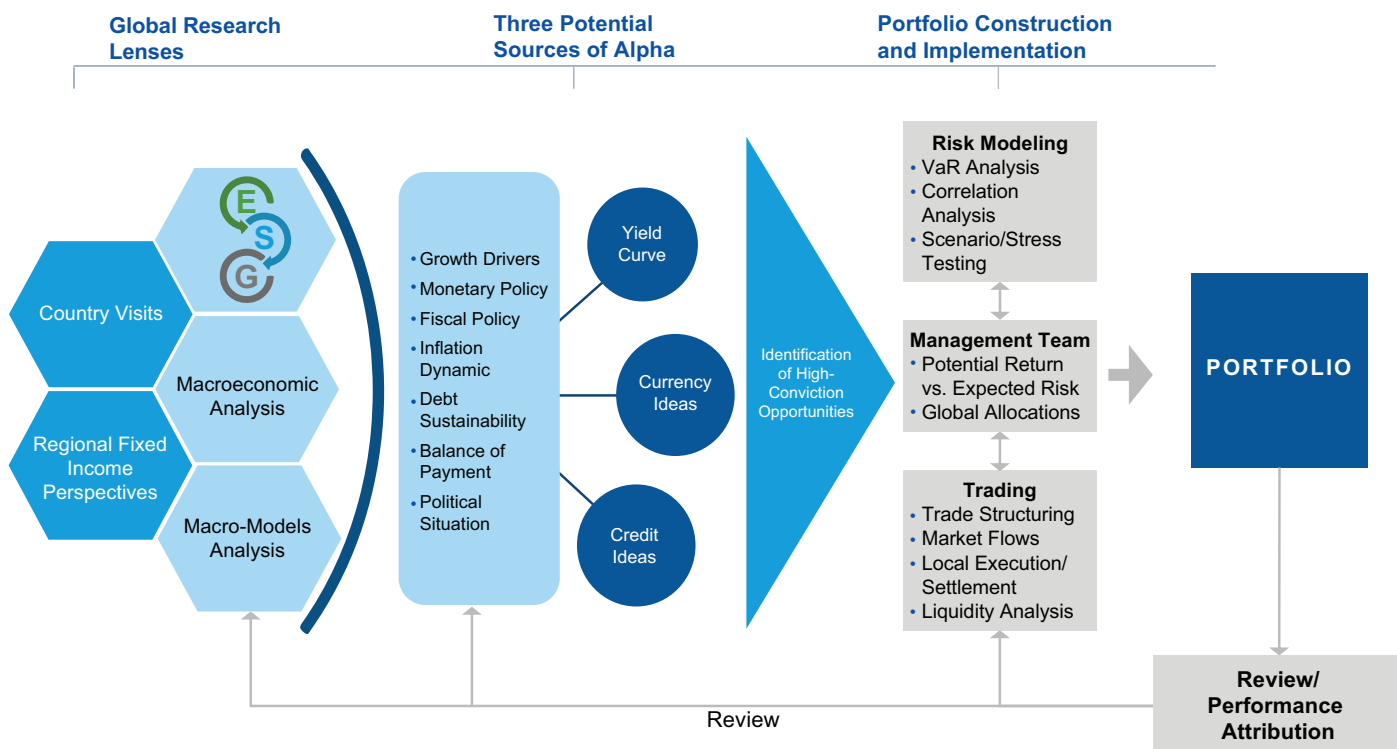

10. Information Ratio and Tracking Error information are displayed for the product versus the Bloomberg Barclays Multiverse Index.

11. Information Ratio is a way to evaluate a manager's ability to outperform a benchmark in relation to the risk that manager is assuming, with risk defined as deviation from the benchmark. This measure is calculated by dividing the portfolio's excess return (portfolio return less the benchmark return) by the tracking error (derived by taking the standard deviation of the monthly differences between the portfolio return and the benchmark return over time).

**What Are the Key Risks?**

The value of shares in the Fund and income received from it can go down as well as up and investors may not get back the full amount invested. Performance may also be affected by currency fluctuations. Currency fluctuations may affect the value of overseas investments. The Fund invests mainly in debt securities issued by government, government-related or corporate entities worldwide and in derivatives. Such securities and derivatives have historically been subject to price movements, generally due to interest rates, foreign exchange rates or movements in the bond market. As a result, the performance of the Fund can fluctuate over time. The Fund may distribute income gross of expenses. Whilst this might allow more income to be distributed, it may also have the effect of reducing capital. Other significant risks include: Chinese market risk, credit risk, foreign currency risk, derivatives instruments risk, emerging markets risk. For full details of all of the risks applicable to this Fund, please refer to the “Risk Considerations” section of the Fund in the current prospectus of Franklin Templeton Investment Funds.

**Important Legal Information**

Securities mentioned in this report are not a solicitation to purchase those securities, and are examples of some securities which performed well. Not all securities in the portfolio performed well. These securities do not represent all the securities purchased, sold or recommended for advisory clients, and the reader should not assume that investment in the security listed was or will be profitable. Holdings are subject to change, holdings of the same issuer have been combined. The information provided is not a recommendation to purchase, sell or hold any particular security. The security identified does not represent the Fund's entire holdings and in the aggregate, may represent a small percentage of such holdings. There is no assurance that security purchased will remain in the Fund, or that security sold will not be repurchased. In addition, it should not be assumed that any securities mentioned were or will prove to be profitable. For the most current information on the fund, please contact your Franklin Templeton marketing representative.

Performance figures are not based on audited financial statements and assume reinvestment of interest and dividends. When comparing the performance of Franklin Templeton Investment Funds (the "Fund") with a benchmark index, it is important to note that the securities in which the Fund invests may be substantially different than those represented by the benchmark index. Furthermore, an investment in Franklin Templeton Investment Funds represents an investment in a managed investment company in which certain charges and expenses, including management fees, are applicable. These charges and expenses are not applicable to indices. Lastly, please note that indices are unmanaged and are not available for direct investment. Certain data and other information shown have been supplied by outside sources. While we consider that information to be reliable, we give no assurance that such data and information is accurate or complete.

The indices include a greater number of securities than those held in the Fund.
