Fund Description

The Fund's investment objective is to maximise, consistent with prudent investment management, a combination of capital appreciation and income. The Fund seeks to achieve its objective by investing principally in a diversified portfolio of equity and debt securities by issuers located, incorporated or have their principal business activities in developing or Emerging Market countries. The Fund will typically invest at least 25% of its assets in Emerging Market equity securities and at least 25% of its assets in debt securities.

1. All holdings are subject to change. Holdings of the same issuers have been combined.

4. Effective 1 September 2019, the Fund's benchmark is Blended 50% MSCI Emerging Markets + 50% JP Morgan GBI-EM Global Diversified Index. The benchmark performance shown is derived from a combination of the Blended 50% MSCI Emerging Markets + 50% JPMorgan EMBI Global Index from the Fund's inception to 31st August 2019 and the Blended 50% MSCI EM + 50% JPMorgan GBI-EM Global Diversified Index from 1 September 2019 to current reporting period.

- In the equity portfolio, communication services stock Naver rallied. Investors remained upbeat about the South Korean internet company, which had benefitted from increased online shopping during the pandemic. We like Naver for its dominant search engine in South Korea and its growing penetration into e-commerce. Its businesses in other areas such as digital content and financial services could also contribute to its longer-term growth, in our view.
- However, shares of India-based ICICI Bank fell. Indian financials stocks were hurt by worries of bad debts in the banking system as the central bank extended loan repayment relief, while holding back from allowing a one-time restructuring of loans. We view ICICI as one of the most resilient Indian banks in a challenging environment, given its strong capital position, prudent lending practices, and industry-leading deposit franchise.
- Sovereign bond yields declined across much of Asia and the Americas but shifted in varying directions across Europe. Select duration exposures in Asia ex Japan, Latin America and Africa (Ghana) contributed to the fixed income portfolio's absolute performance. We held select duration exposures in countries with relatively higher yields and that have varying degrees of economic resilience to external shocks, in our assessment.
- The fixed income portfolio's net-positive positions in the Brazilian real and Japanese yen detracted from absolute results, as did its net-negative position in the Australian dollar. We continued to hold net-negative positioning in the Australian dollar to hedge broad-based beta risk across emerging markets. We moved to a net-positive exposure in the Japanese yen midway through 2019 as policy divergence between the US Federal Reserve and the Bank of Japan softened, and because the yen shows potential to strengthen as a perceived safe haven on deepening global risk aversion.

Outlook & Strategy

- With the COVID-19 outbreak likely passing its peak in the United States and China (barring a second wave), and governments focusing on returning to normalcy, attention has once again turned to the US-China trade conflict. The trade war has expanded into disputes over a range of areas, including technology, finance, and the pandemic, creating volatility in EM equities. Notwithstanding market concerns over a possible collapse of the "phase one" trade agreement, we expect both parties to work towards meeting the obligations.
- Although governments globally have undertaken unprecedented fiscal and monetary stimulus to offset the economic impact of the pandemic, the exact timing of a recovery is uncertain. We expect corporate earnings downgrades for 2020 across most countries and sectors. EM equity valuations relative to developed markets look appealing to us. Although we could see volatility in earnings forecasts in the coming months, we believe that our focus on companies' long-term sustainable earnings power should help us better navigate this period.
- From a fixed income perspective, we think it is still too early to pursue additional risk as the world is still in the first phase of the economic repercussions. The recent rallies across risk assets reflect an underappreciation of the risks for a second wave of infections and a second leg down in financial markets, in our view. We're currently focusing on specific perceived safe-haven investments, while emphasising a select set of higher-yielding EMs that have relatively resilient domestic economies. We're aiming to derive alpha from different sources than the low-to-negative yielding developed fixed income markets, which have limited upside potential left as yields grind to historic lows.
- We currently remain cautious on the broad outlook for EMs as a whole, but we see risk-adjusted value in specific countries. It remains crucial to be selective. Countries that were in stronger fundamental shape before the crisis generally have better prospects to endure the substantial economic headwinds. Domestically oriented economies have comparatively better prospects than externally dependent economies, given the collapse in global aggregate demand. The opportunities in EMs remain highly idiosyncratic, as some countries have inherent resiliencies while others are highly vulnerable to external and internal shocks. We continue to monitor conditions and expect that the impacts of the COVID-19 pandemic could persist for several months, potentially pushing out the timeline for when certain investment opportunities may become suitable.

Portfolio Characteristics^{6,7,8,9,10}

Equity Characteristics

	Portfolio	MSCI Emerging Markets Index
Price to Earnings (12-Month Trailing)	12.51x	14.26x
Price to Book	1.54x	1.50x
Price to Cash Flow	6.61x	8.91x
Market Capitalisation (Millions in USD)	163,634	62,614
Dividend Yield	2.92%	2.84%

Fixed Income Characteristics

	Portfolio	JP Morgan GBI-EM Global Diversified Index
Yield to Maturity	3.89%	4.33%
Yield to Worst	3.89%	4.30%
Average Duration	1.63 Yrs	5.29 Yrs
Average Credit Quality ¹¹	BBB+	BBB
Average Weighted Maturity	1.97 Yrs	7.51 Yrs

11. The average credit quality (ACQ) rating may change over time. The portfolio itself has not been rated by an independent rating agency. The letter rating, which may be based on bond ratings from different agencies, is provided to indicate the average credit rating of the portfolio's underlying bonds and generally ranges from AAA (highest) to D (lowest). For unrated bonds ratings may be assigned based on the ratings of the issuer or other relevant factors. The ACQ is determined by assigning a sequential integer to all credit ratings AAA to D, taking a simple, asset-weighted average of debt holdings by market value and rounding to the nearest rating. The risk of default increases as a bond's rating decreases, so the ACQ provided is not a statistical measurement of the portfolio's default risk because a simple, weighted average does not measure the increasing level of risk from lower rated bonds. The ACQ is provided for informational purposes only. Derivative positions are not reflected in the ACQ.

15. Ratings shown are assigned by one or more Nationally Recognized Statistical Rating Organizations ('NRSRO'), such as Standard & Poor's, Moody's and Fitch. The ratings are an indication of an issuer's creditworthiness and typically range from AAA or Aaa (highest) to D (lowest). When ratings from all three agencies are available, the middle rating is used; when two are available, the lowest rating is used; and when only one is available, that rating is used. Foreign government bonds without a specific rating are assigned the country rating provided by an NRSRO, if available. The NR category consists of ratable securities that have not been rated by an NRSRO. The N/A category consists of nonratable securities (e.g., equities). Cash and equivalents are excluded from this breakdown.

What Are the Key Risks?

The value of shares in the Fund and income received from it can go down as well as up and investors may not get back the full amount invested. Performance may also be affected by currency fluctuations. Currency fluctuations may affect the value of overseas investments. The Fund invests mainly in debt and equity securities issued by entities located in emerging countries. Such securities have historically been subject to price movements, generally due to interest rates, market factors or movements in the equity and bond markets. As a result, the performance of the Fund can fluctuate considerably over time. Other significant risks include: credit risk, derivatives risk, emerging markets risk, liquidity risk, Shanghai-Hong Kong Stock Connect risk. For full details of all of the risks applicable to this Fund, please refer to the "Risk Considerations" section of the Fund in the current prospectus of Franklin Templeton Investment Funds.

16. Beta, Information Ratio and Tracking Error information are measured against the Linked 50% MSCI EM + 50% JPMorgan GBI-EM Global Diversified Index.

17. Information Ratio is a way to evaluate a manager's ability to outperform a benchmark in relation to the risk that manager is assuming, with risk defined as deviation from the benchmark. This measure is calculated by dividing the portfolio's excess return (portfolio return less the benchmark return) by the tracking error (derived by taking the standard deviation of the monthly differences between the portfolio return and the benchmark return over time).

Important Legal Information

Effective 2 September 2019, Templeton Emerging Markets Balanced Fund was renamed Templeton Emerging Markets Dynamic Income Fund.

Templeton Emerging Markets Dynamic Income Fund is a sub-fund of the Luxembourg-domiciled Franklin Templeton Investment Funds (FTIF).
