## What are the Risks?

The value of shares in the Fund and income received from it can go down as well as up and investors may not get back the full amount invested. **Debt Securities Risk:** Investments in debt securities or money market instruments are subject to interest rate risk, credit risk, default risk and may be exposed to specific risks including but not limited to sovereign risk, high yield securities risk, restructuring risk and risk related to the use of credit ratings. **Foreign Exchange and Currency Risk:** The Sub-Fund can be affected favourably or unfavourably by changes in currencies and exchange control regulations. The income earned by the Sub-Fund may be affected by fluctuations in foreign exchange rates. **Interest Rate Risk:** Investments in fixed income securities are subject to interest rate fluctuations. In general, the prices of fixed income securities rise when interest rate falls, and fall when interest rate rises. The longer the term of a fixed income security, the more sensitive it will be to fluctuations in value from interest rate changes. **Liquidity Risk:** Trading volumes in the underlying investments of the Sub-Fund may fluctuate significantly depending on market sentiment. There is a risk that investments made by the Sub-Fund may become less liquid in response to market developments, adverse investor perceptions or regulatory and government intervention (including the possibility of widespread trading suspensions implemented by domestic regulators). In extreme market conditions, there may be no willing buyer for an investment and so that investment cannot be readily sold at the desired time or price, and consequently the Sub-Fund may have to accept a lower price to sell the relevant investment or may not be able to sell the investment at all. An inability to sell a particular investment or portion of the Sub-Fund's assets can have a negative impact on the value of the Sub-Fund or prevent the Sub-Fund from being able to take advantage of other investment opportunities. **Redemption Risk:** There may be a 10% limit on the number of Shares of a Class that can be redeemed on a Dealing Day. Therefore, a redemption request may be deferred to the next Dealing Day (which is subject to the same limit) if redemptions exceed the limit on that day. **Risks relating to Tokenisation of the Register:** Shares in respect of the Sub-Fund will be evidenced by an entry in the Register in the form of a Tokenised Register to be maintained by the Registrar and Transfer Agent in respect of the Sub-Fund in the form of transactional data via public blockchain networks represented by blocks on a distributed ledger plus certain Off-Chain Information (if any). Distributed ledger technology is still new, widely untested and subject to known and unknown risks. These include dependence on third party providers to access the distributed ledger, potential software weaknesses and undiscovered technical flaws due to the early developmental state of the blockchain ecosystem architecture (including but not limited to the distributed ledger, the smart contract (or token configuration) and any related technology or software), legal uncertainties surrounding the regulatory status of Tokenised Register and distributed ledger technologies and privacy risks. On the account of these risks, the Company may never achieve market acceptance and may not be able to attract sizable assets or achieve scale. **Securities Lending or Repurchase Transactions Risk:** Securities lending or repurchase transaction (including reverse repurchase transactions) involve counterparty risk, credit risk, liquidity risk, sufficiency of collateral risk, collateral investment risk, delivery risk and operational risk.

Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.

## Glossary

**Total Expense Ratio:** Total Expense Ratio (TER) includes the fees paid to the management company, the investment manager and the depository, as well as certain other expenses. The TER is calculated by taking the relevant main material costs paid out over the 12-month period indicated and dividing them by the average net assets over the same period. The TER does not include all expenses paid by the fund (for example, it does not include what the fund pays for buying and selling securities). For a comprehensive list of the types of costs deducted from fund assets, see the relevant offering documents. For funds that lack 12 months of data, or for which TER is not likely to give a fair idea of likely future costs, the figure shown is an estimate. **Comparator:** Benchmark is used for comparing Fund performance, but is not a constraint to Fund Investment.

**Important Information**

The Franklin OnChain U.S. Dollar Short-Term Money Market Fund is a money market fund (**Sub-Fund Registration No.: T24VC0111E-SF001**).
