

Franklin Templeton Western Asset Global Bond Trust

A SGD ACC: SG9999005193

This is a marketing communication. Please refer to the relevant offering documents before making any final investment decisions.

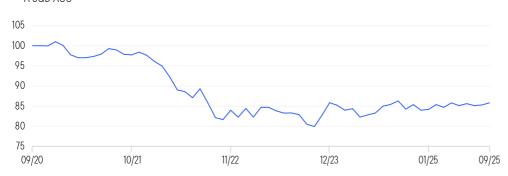

Investment Overview

The investment objective of the Trust is to maximise total returns in Singapore Dollar terms over the longer term by investing in a portfolio of high quality debt securities of Singapore and major global bond markets such as the G10 countries and Australia and New Zealand. The Trust aims to outperform the FTSE World Government Bond Index ex Japan (hedged to Singapore Dollar). The Trust is actively managed.

Past performance does not predict future returns.

| Performance Fee | _ |

The charges are the fees the Fund charges to investors to cover the costs of running the Fund. Additional costs, including transaction fees, will also be incurred. These costs are paid out by the Fund, which will impact on the overall return of the Fund. Fund charges will be incurred in multiple currencies, meaning that payments may increase or decrease as a result of currency exchange fluctuations.

What are the Risks?

The value of shares in the Fund and income received from it can go down as well as up and investors may not get back the full amount invested. The strategy is subject to the following risks which are materially relevant but may not be adequately captured by the indicator: **General risks**: Before investing in the Trust, you should consider and satisfy yourself as to the risks of investing in the Trust. Generally, some of the risk factors that you should consider are economic (such as growth, inflation or policy changes), interest rate, political, liquidity, default, foreign exchange, regulatory, repatriation risks and the risks of investing in warrants. **Market Risks**: Market risk is the possibility of an investor experiencing losses due to factors that affect the overall performance of financial markets, including: changes in interest rates; trade, fiscal, monetary and exchange controls programmes and policies of governments; national and international political and economic events; the global and domestic effects of a pandemic; and any other failure of markets to function. Cyber Security Risks: With the increased use of technologies such as the internet and other electronic media and technology to conduct business, the Managers, the Trust and the Trust's service providers and their respective operations are susceptible to operational, information security and related risks including cyber security attacks or incidents. Specific risks: Prices of securities in the Trust may go down or up in response to changes in economic conditions, political conditions, interest rates and the market's perception of securities which in turn may cause the price of Units to rise or fall. The income earned by the Trust may be affected by fluctuations in foreign exchange rates. The Managers and (as the case may be) the Sub-Managers will actively monitor and manage the Trust's exposure to adverse foreign exchange risks by hedging through the forwards or futures markets. Any investments by the Trust in bonds, debentures, loan stocks, convertibles and other debt securities may rise or decline in value if interest rates change. In general, the price of debt securities rises when interest rates fall, and falls when interest rates rise. The investments in the Trust may be adversely affected by political instability as well as exchange controls, changes in taxation, foreign investment policies and other restrictions and controls which may be imposed by relevant authorities. Subject to paragraph 19.4 of the Prospectus and the Deed, the Trust will use swaps, forwards, options and futures for the purposes of hedging and efficient portfolio management. Where such instruments are financial derivatives on commodities, such transactions shall be settled in cash at all times or as may otherwise be required under the Code. While this may create substantial opportunities, it also involves risk, including possible default by counterparties to the arrangement. Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.

Glossary

Comparator: Benchmark is used for comparing Fund performance, but is not a constraint to Fund Investment.

Average Credit Quality: The average credit quality reflects the holdings of the underlying issues, based on the size of each holding and ratings assigned to each based on rating agency assessments of its creditworthiness. Average Life: An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings. Effective Duration is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes. Standard Deviation: Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return.

Portfolio Data Information

Holdings are provided for information purposes only and should not be deemed a recommendation to buy or sell the securities mentioned.

Credit Quality is a measure of a bond issuer's ability to repay interest and principal in a timely manner. The credit ratings shown are based on each portfolio security's rating as provided by Standard and Poor's, Moody's Investors Service and/or Fitch Ratings, Ltd. and typically range from AAA (highest) to D (lowest), or an equivalent and/or similar rating. For this purpose, if two or more of the agencies have assigned differing ratings to a security, the lowest rating is used. Securities that are unrated by all three agencies are reflected as such. The credit quality of the investments in the fund's portfolio does not apply to the stability or safety of the fund. These ratings are updated monthly and may change over time. **Please note, the Fund itself has not been rated by an independent rating agency.**

Important Information

The Trust may use swaps, forwards, options and futures for the purposes of hedging and efficient portfolio management.

The CPF interest rate for the Ordinary Account (OA) is computed based on the 3-month average of major local banks' interest rates, subject to the legislated minimum interest of 2.5% per annum. The interest rate for OA is reviewed quarterly. The CPF interest rate for Special (SA) and Medisave Account (MA) is computed based on the 12-month average yield of 10-year Singapore Government Securities (10YSGS) plus 1%, subject to the current floor interest rate of 4% per annum. The interest rate is reviewed quarterly. To enhance the retirement savings of Singaporeans, the CPF Board pays extra interest on the first \$60,000 of your combined CPF balances (capped at \$20,000 for Ordinary Account (OA)). You could receive up to 6% on a portion of your CPF balances. Please note that the first \$20,000 in your OA and the first \$40,000 in your SA need to be set aside prior to investing OA and SA monies.
