KEY PRODUCT FEATURES

WHAT ARE YOU INVESTING IN?

- You are investing in an open-ended collective investment scheme constituted in Luxembourg as a UCITS that aims to achieve long-term capital appreciation, targeting a yearly average return of 5% (net of fees) in excess of the Euro Interbank Offered Rate (EURIBOR) over a rolling three year period. The Fund aims to achieve its objective with an annualised volatility ranging, under normal market conditions, between 8% and 11%.
- Under normal circumstances, you will receive regular distributions out of income depending on the distribution share classes you are investing in. Any distributions may also be made out of the capital, net realised and net unrealised capital gains as well as income gross of expenses of the Fund, which will reduce the NAV of the Fund.

Refer to “Investment Objective, Focus and Approach of the Funds” section of the Singapore Prospectus, and the “Dividend Policy” section of the Luxembourg Prospectus.

Investment Strategy

- The Fund will actively manage direct and indirect exposure to equities, fixed income securities, collective investment schemes, ancillary liquid assets, bank deposits, money market instruments and money market funds, as well as indirect exposure to “alternative” investments.
- The Fund invests directly and indirectly in securities of issuers of any market capitalisation located anywhere in the world, including emerging markets.

Refer to “Investment Objective, Focus and Approach of the Funds” section of the Singapore Prospectus.

• The Fund may have up to 100% net long exposure to equities/related securities. The remaining net assets are normally invested in debt securities, and up to 10%, in “alternative” asset classes such as real estate, infrastructure, commodities and carbon emissions certificates traded on the European Union Emissions Trading System, the latter being effected through the use of (i) financial derivative instruments on eligible assets or on eligible financial indices or (ii) structured notes. Investments in contingent convertible securities are limited to 5% of the Fund’s net assets. • The Investment Manager also considers Environmental, Social and Governance (ESG) factors as an integral component of its fundamental investment research and decision process. The Environmental and/or Social characteristics (within the meaning of Article 8 SFDR) promoted by the Fund are detailed in the Appendix G of the Luxembourg Prospectus attached to the Singapore Prospectus. • The Fund may use financial derivative instruments for hedging, efficient portfolio management and investment purposes. • The Fund may seek exposure to, inter alia, commodities or real estate through the use of financial derivative instruments on eligible financial indices. • The Fund may hold or invest significant amounts in bank deposits, money market instruments or money market funds pursuant to the applicable investment restrictions (up to 100% of its net assets). • The expected level of exposure that could be subject to securities lending transactions amounts to 5% of the Fund’s net assets, subject to a maximum of 50%. • The expected level of exposure that could be subject to total return swaps (unfunded) amounts to 70% of the Fund’s net assets, subject to a maximum of 120%.

KEY RISKS	
WHAT ARE THE KEY RISKS OF THIS INVESTMENT? The value of the product and its dividends or coupons may rise or fall. These risk factors may cause you to lose some or all of your investment. There is no guarantee that the Fund will achieve its return objective, nor that it will remain within the aimed-for volatility range.	Refer to the “Risk Factors” section of the Singapore Prospectus and “Risk Considerations” section of the Luxembourg Prospectus.
Market and Credit Risks	
• Your investments are exposed to equity markets risk - Your investments may be subject to significant price movements due to the impact of economic, political, market, and issuer-specific factors. • Your investments are exposed to debt securities risk - Debt securities are sensitive to changes in interest rates, widening of credit spreads and defaults risk of issuers. A fixed income security’s value will generally increase in value when interest rates fall and decrease in value when interest rates rise. • Your investments are exposed to currency risks - The Fund is exposed to the risk of loss arising from exchange-rate fluctuations or due to exchange control regulations.	

Liquidity Risks				
• Your investments are exposed to liquidity risks of the underlying investments - Under exceptional market conditions the manager may be forced to sell assets of the fund at a discount in order to meet continued redemption requests. • The Fund is not listed, and you can realize your Shares only on Dealing Days - There is no secondary market for the Fund. All redemption requests should be submitted in the manner set out in the Prospectus. • Your realization request may be deferred or suspended - Redemptions of Shares may be deferred when more than 10% of the value of the Fund's Shares are redeemed or exchanged on any one Dealing Day. Your right to realize Shares may also be temporarily suspended under certain circumstances as described in the Prospectus.			Refer to the sections "Sale of Shares" and "Suspension of Valuation, Issue, Sale and Switching of Shares" of the Singapore Prospectus.	
Product-Specific Risks				
• Your investments are exposed to derivatives risk - The Fund may invest in financial derivative instruments which may be purchased on regulated markets or over-the-counter and may have less liquidity and more volatility than conventional assets, exposing the Fund to higher risks and potential losses. When financial derivatives contracts are traded over the counter, the Fund may find itself exposed to risks arising from the solvency of its counterparties and from their ability to respect the conditions of these contracts. • Your investments are exposed to emerging markets risks - The Fund may invest in emerging markets which involve a greater risk of loss and are more volatile than investing in more developed countries due to, inter alia, greater political, tax, economic, foreign exchange, liquidity, volatility and regulatory risks.
